QuickBite – Online Food Delivery System

1. Introduction

1.1 Purpose

The purpose of this document is to describe the requirements of the “QuickBite – Online Food Delivery System.” This system will provide a platform for customers to order food online, restaurants to manage orders, and delivery riders to deliver food efficiently.

1.2 Scope

QuickBite is a web/mobile-based food delivery system that connects customers with nearby restaurants. It provides features such as food ordering, payment processing, real-time tracking, and order management.

1.3 Definitions, Acronyms, and Abbreviations

- SRS – Software Requirements Specification
- UI – User Interface
- COD – Cash on Delivery

1.4 References

- IEEE 830 SRS Standard
- Software Requirement Engineering Lab Guidelines
- Research articles related to food delivery systems

1.5 Overview

This document includes system description, functional and non-functional requirements, system scope, stakeholders, and expected benefits.

2. Overall Description

2.1 Product Perspective

QuickBite is an independent system that digitizes traditional food ordering processes. It replaces manual ordering with an automated platform.

2.2 Product Functions

The system will provide:

- User registration and login
- Restaurant browsing and food search
- Cart management
- Order placement
- Payment processing
- Real-time tracking
- Delivery management
- Admin dashboard

2.3 User Classes and Characteristics

User Type	Description
Customer	Places and tracks orders
Restaurant Owner	Manages menu and orders
Delivery Rider	Delivers orders
Admin	Manages system

2.4 Operating Environment

- Web browsers (Chrome, Edge, etc.)
- Mobile devices

- Internet-based system

2.5 Design and Implementation Constraints

- No international delivery
- No AI-based recommendations
- No cryptocurrency payments

2.6 Assumptions and Dependencies

- Users have internet access
- Restaurants will update menus regularly
- Payment services will be available

3. System Features (Functional Requirements)

3.1 User Account Management

- FR-01: The system shall allow users to create accounts
- FR-02: The system shall allow secure login
- FR-03: The system shall allow password reset

3.2 Restaurant and Menu

- FR-04: Display restaurants
- FR-05: Search functionality
- FR-06: Show menu details

3.3 Cart and Order

- FR-07: Add items to cart
- FR-08: Update/remove items
- FR-09: Place orders

3.4 Payment System

- FR-10: Online payments
- FR-11: Cash on delivery

3.5 Order Processing

- FR-12: Order confirmation
- FR-13: Accept/reject orders
- FR-14: Update preparation status

3.6 Delivery Management

- FR-15: Assign riders
- FR-16: Update delivery status
- FR-17: Real-time tracking

3.7 Additional Features

- FR-18: Order history
- FR-19: Ratings & reviews
- FR-20: Admin management

4. External Interface Requirements

4.1 User Interfaces

- Simple and user-friendly UI
- Mobile and web responsive design

4.2 Hardware Interfaces

- Smartphones, laptops, servers

4.3 Software Interfaces

- Payment gateway integration
- Database systems

4.4 Communication Interfaces

- Internet-based communication
- Notifications (SMS/Email optional)

5. Non-Functional Requirements

Type	Description
Performance	Response within 2–3 seconds
Security	Password encryption
Usability	Easy interface
Reliability	No data loss
Availability	24/7 system
Scalability	Supports many users
Maintainability	Easy updates
Compatibility	Web & mobile

6. System Scope

6.1 In Scope

- Registration & login
- Menu management
- Order system
- Payment integration
- Tracking system
- Reviews
- Admin panel

6.2 Out of Scope

- International delivery

- Drone delivery
- Cryptocurrency payments
- AI recommendations
- Multi-language support

7. Stakeholders

Stakeholder	Description
Customer	Orders food
Restaurant Owner	Manages orders
Delivery Rider	Delivers food
Admin	Controls system
Payment Provider	Handles payments
Support Staff	Handles issues

8. Tools and Technologies

Category	Tool
Documentation	Microsoft Word
UML	draw.io
Collaboration	Google Drive
Project Management	Trello
Prototyping	Figma

9. Expected Benefits

Customers

- Easy ordering
- Better tracking
- Convenience

Restaurants

- Digital management
- More customers

Riders

- Clear tasks
- Better coordination

Admin

- Easy monitoring
- Better control

10. Conclusion

QuickBite provides a reliable and efficient food delivery solution by improving traditional ordering methods. It enhances communication, reduces delays, and ensures better user experience.
