QuickBite – Online Food Delivery System

1. Introduction

Requirements elicitation is an important phase in software requirement engineering. It helps in gathering information from stakeholders to understand the needs and expectations of the system. For the **QuickBite Online Food Delivery System**, different elicitation techniques were used to collect functional and non-functional requirements.

The purpose of this report is to explain the requirement gathering process, stakeholder involvement, identified requirements, and possible conflicts found during elicitation.

2. Elicitation Techniques Used

The following elicitation techniques were used:

Technique	Purpose
Interviews	To collect detailed information from users and restaurant owners
Surveys	To understand user preferences and common issues
Brainstorming	To generate ideas for system features
Observation	To study current food ordering methods
Prototyping	To understand user expectations through interface ideas

3. Stakeholder Analysis

Stakeholder	Role in System	Interest Level	Main Expectations
Customer	Orders food online	High	Fast delivery and easy ordering
Restaurant Owner	Manages menu & orders	High	Better order management

Delivery Rider	Delivers orders	Medium	Clear delivery instructions
System Administrator	Manages system	High	Smooth operation
Payment Provider	Handles payments	Medium	Secure transactions
Customer Support Staff	Handles issues	Medium	Easy access to data

4. Interview Summary

Interviews were conducted with students, restaurant owners, and delivery riders.

4.1 Key Findings from Interviews

Customers

- Want quick order placement
- Prefer live tracking
- Want COD + online payment
- Dislike delays and wrong orders

Restaurant Owners

- Need simple order management
- Want menu update options
- Need order notifications

Delivery Riders

- Need accurate locations
- Want assignment notifications
- Need easy status updates

5. Survey Summary

A survey was conducted among students and food delivery users.

5.1 Survey Results

Question	Common Response
Preferred payment	COD + Online
Important feature	Fast tracking
Common problem	Late delivery
Preferred app	Mobile-friendly
System quality	Simple UI

6. Brainstorming Session Summary

A brainstorming session was conducted within the team.

6.1 Ideas Generated

- Live tracking
- Ratings & reviews
- Notifications
- Order cancellation
- Rider assignment
- Admin dashboard
- Order history
- Search & filters

7. Observation Summary

The team observed real-world ordering systems.

7.1 Observations

- Many restaurants use manual systems
- Customers often call directly
- Manual handling causes confusion
- Some apps are complex
- Small restaurants need simple systems

8. Prototype Feedback

Basic UI sketches were shown to users.

8.1 Feedback Received

- Users prefer simple UI
- Large buttons are helpful
- Tracking should be easy
- Restaurants want simple menu management

9. Raw Functional Requirements

FR ID	Requirement
FR-01	Create account
FR-02	Login
FR-03	Password recovery
FR-04	Display restaurants
FR-05	Search food/restaurants
FR-06	Show menus
FR-07	Add to cart
FR-08	Update/remove cart
FR-09	Place orders
FR-10	Online payment
FR-11	Cash on delivery

FR-12	Order confirmation
FR-13	Accept/reject orders
FR-14	Update preparation
FR-15	Assign riders
FR-16	Update delivery
FR-17	Real-time tracking
FR-18	Order history
FR-19	Ratings & reviews
FR-20	Admin management

10. Raw Non-Functional Requirements

NFR ID	Requirement
NFR-01	Response in 2–3 sec
NFR-02	Password encryption
NFR-03	Simple UI
NFR-04	24/7 availability
NFR-05	Reliable data storage
NFR-06	Scalability
NFR-07	Mobile + web support
NFR-08	Maintainability
NFR-09	Secure payment
NFR-10	Performance in peak hours

11. Conflicts and Ambiguities Identified

Issue	Description
Payment Method	Restaurants vs customer preference
Cancellation	Flexible vs restricted
Delivery Time	Unrealistic expectations
Notifications	Too many vs limited

12. Requirement Prioritization

Priority	Requirements
High	Login, order, payment, tracking
Medium	Reviews, notifications
Low	Filters, promotions

13. Challenges Faced During Elicitation

- Different stakeholder expectations
- Non-technical users
- Time limitations
- Unclear initial requirements

These were handled through discussion and clarification.

14. Conclusion

The elicitation process helped identify system needs for customers, restaurants, riders, and admins.

Techniques like interviews, surveys, brainstorming, observation, and prototyping were used to gather accurate requirements.

These requirements will be used to develop the SRS document.
